Day 6 Challenges

Challenge 1: For-In Loop - Sum of Digits

Description: Write a program using a `for-in` loop that calculates the sum of all digits in a given number.

Challenge 2: Repeat-While Loop - Guessing Game

Description: Create a simple number guessing game using a `repeat-while` loop. The program should randomly generate a number between 1 and 10. The user should keep guessing until they guess the correct number.
